

MOBILE APP DEVELOPMENT

Our mobile application development offers both the customer and enterprise functions. We provide development capabilities in iOS, Android and Microsoft. Our application development services are cost effective and client's centric due to best practices and knowledge acquired by developing various different kinds of mobile and enterprise applications.

OUR TECHNOLOGY/ DOMAIN EXPERTISE SERVICES INCLUDE

- > Consumer and enterprise applications in retail, healthcare, finance, Food & Beverages, insurance, logistic, field force automation (Security Guards/agencies) etc.
- > Location bases services, mobile streaming, mobile commerce, and mobile ads
- > iOS, Android, HTML5, Phone gap, etc.
- > Web services such as XML, HTTP, JSON, REST
- > Embedded devices drivers like FTDI, etc.

OUR MOBILITY STRATEGY AND CONSULTING OFFERS 3 PHASES APPROACH

- Client Interview: In this phase, we analyze and assess the requirement and identify the goals/objective of mobile development
- Define: In this phase, our subject matter expert team identifies functionality and feature list, define the process flow and demonstrate the capabilities.
- Blue print: In this final phase, we recommend possible solution approach based on the best practices and estimate the delivery plan
